You can also balance the stereo for your listening position and correct damage, such as a defective tweeter, defective- a 100 kB DOS program that uses SoundBlaster(R)-compatible to evaluate 1/3 to 1/24 octave spectra. Supports the full calibration of mixer (result independent of mic/line input and input gain) and allows the compensation of the frequency response of the sound card (separated for microphone and line). As SB_OCT is fully key operating, it is especially interesting for mobile applications (provided with a wide range of portable sound cards). SINUSGEN - is a simple sinus generator program. The frequency is adjustable from 20 to 10000 Hz and the output level of the sinusoidal signal can be reduced. The FM chip of the sound card is used for signal generation. For frequencies above 4000 Hz the sine signal can sound a bit distorted depending on the chip/soundcard FM! The SINUSGEN program. EXE should work with all AdLib® compatible sound cards (which means almost any sound card) under MS-DOS® or low WINDOWS® (in DOS or direct box). Speaker design package - Speaker closure program predicts box response. SPEAKER ENCLOSURE CALCULATOR v1.0 - This small program will calculate a nice sound enclosure for all types of dynamic speakers. The good thing is, you don't need a acoustic doctorate to use it. SKEM 1.1 - was developed to fill the need for a simple, easy to use schematic design and printing program. SKEM 1.1 is only intended to be used to draw and print schemes (no more). It's not a CAD program. A professional look scheme can be done in minutes. The printing of a scheme is done using an HP (or equating) laser printer. Snell Computer Assisted Room Analyzer and Listening Environment Optimizer - has been developed to make two powerful mathematical tools of scientific acoustics accessible to listeners res res nedep senoiacaroloc satse ed aminÄm n'Ääicatixe al arap refow ed senoiacibu sal s;ÄmedÄ .ralugnatcer n'Ääicatibah reitqulauc arap ranimreted nedep es aicneucerf ajab ed sanos senoiacaroloc ed dadihibidua aviteler al y opmae le .satneimarreh satse odnazilitU Speakers.exe - This procedure and cages have evolved since 1978. The working sheets implement a combination of the world that Thiele suggested in "Loudspeakers in veined boxes: part II", and Ashley & AMP; Swan described in "Experimental Determination of Low-Frequency Loudspeaker parameters". Throughout the years, numerous improvements have been addressed. The arithmä © ethical is direct but tedious. By automating cages, working sheets eliminate composition errors and minimize many of the other sources of error. In addition, these programs direct the process of making the measurements, making the conversions of the unit and printing the results in a convenient format. Speaker Workshop - Speaker Workshop is a Windows 95 -based program designed to test speakers and design speakers. The program is based on a structure of ongoing (folders and "files") for a speaker design. All graphics, tests, alternative design, etc. They are stored in a single document - easily accessible with names that can be long and descriptive. The program has a multi -step undo/round ability. The speaker workshop can test and measure: driver's impedance, passive components, transfer function, acetic response of the driver, and armed distortic. Speaker workshop can help you designer enclosures, stock crossings, custom crossings and impedance compensation circuits. Speaker Workshop includes a seage generator used by your sound board to reproduce audio seals. The speaker workshop has a wide range of analytical tools, including FFT, Inverse FFT, Scaling, Splicing, Filtering and Charring Speaker Workshop requires a computer running with Windows 95 and a complete Dä*plex sound card (to try) Worx Version 1.1 - Speakerworx automatically calculates the position high definition speaker based on the dimensions of your room. Based on the specifications of the Audio Engineering Society, this software calculates the optimal speaker position within the room and also analyzes analyzesMOOR XHT .SNGISED EERHT EERTT OT TET UNOOS Eht .secnadepam cerps our Sepols CIPHSSORC SEUELC REVO-SSORC GNTALLUCLAC tsissa tsissa tsised margorp - rev-x CT .daol Evisitser of skrofen srorretsed the skrord-"nnuofhed srorretsed ngiseD rekaepsduoL eHT" .snosekciD ecnaV morf era noisrev siht ni desu salumrof eHT. .stcejorp gnidiub rekaepsduol ym rof snoitaculauc revossorc revossorc yriid dna kciud od ot etorw l margorp elttil a si siht .5.1V RENGISED REVOSSORC EHT. One for McIntosh and one for PC. It will calculate the room modes and allow the user to place listening chairs to avoid severe suctionaries in response to the room. Triodo 1.0 Gain Calculator - Author: Cé Sar D. Bazzi - Freeware Tube.exe is a small program to help calculate the basic parameters of a coiled transformer output phase push. It works for all modes of operation and triodos or pentode. Mathematics are from a RCA transmission tube manual written at the end of the 1930s. Tube database III: a cross-reference programme of vaccine tubes. The user can update, add, delete, edit and print the tube data that they select from the entire data file. Transmission Line Model: uses a model of a transmission line speaker system to predict small signal response, input impedance or maximum input voltage. Unmask Resistance Band Reader: A simple DOS program that allows you to read color codes Resistor. Visual Audio V1.0 - Sixteen bands for the real time spectrum analyzer of the left and right channel. Left and right channel beak analyzer (oscilloscope). The compact disc player with all needs, including the shuffle game, the continuous game and the transcurred/total screens. Mixer with full control over the mixing skills of your sound card, including low, sharp, loading, improved and 100 mixing levels for inputs/outputs available. Save and load your favorite settings to/from one of the eight presets. Visual Ears - Speaker placement program: your room, and in which part of your room you have chosen to locate your speakers and main listening position, can make a differencesignificant in the quality of reproduction. Visual Ears helps you find positioning for you and your speakers, which can reduce the effects of the room up to 15 dB. Watts V2.1 - Power calculator is reo Watts was written to help the electronic technician to find the output power of an audio amplifier or or or pushed and efficiently. This program will show the RMS output power at a glance. You must find the simple and easy -to -use programs interface. Accelerate service work and hobbies construction. WAVE GENERATER V1.1 - Generates Sine functions, square, triangular and steps, as well as personalized functions (waves) using the rattan cursor. The characteristics allow the editing of waves, as well as saving and loading signals from the user defined and data defined. The amplitude of the sign, the delay of the phase and the compensation are all redeemable. Winisd - It is software speakers for Windows 9x/NT environment. You can design closed boxes, wares and banddass with this program. It also allows you to calculate some different types of filters. Written by Juha Hartikainen, JJ Richard, Choong Kiat Yian Wire Gauge Spred Sheet [Excel] - Everything you need to work with Za2 Audiodrome Audiometer wire - This program will convert your computer into an audio meter is reo, using your za as entrance output. WAVE GENERATER V1.1 - Generates Sine functions, square, triangular and steps, as well as personalized functions (waves) using the rattan cursor. The characteristics allow the editing of waves, as well as saving and loading signals from the user defined and data defined.
