Bite the pillow

Home » Best Down PillowsDown pillows have a cult following in the bedding world. Many people who love this style of pillow can't fathom the thought of sleeping on anything else. No matter whether you fall into that camp or you're in the market for your first-ever down pillow, it's important to do your research, because they can range pretty widely in terms of quality.To zero in on the best down pillows for your needs, it helps to think about a few factors including your budget, your preferences when it comes to materials (both in terms of pillow fillings and shells), your sleep style (which can influence whether you want a flat or puffy pillow), and so on. Also consider whether it's important to you to purchase a pillow that's made from responsibly sourced down. Then, check out our roundup to kick off your search with some stellar options.Editor's ChoiceDownPillows continentalContinental Bedding Premium 100% Down PillowsPros: The pillow is filled with 550 fill power, 100% white goose down and wrapped in a 400 thread count, 100% Egyptian cotton shell. The pillows are sold in a set of two. So even though they have a high price tag, you're getting more value than a similar price tag for an individual pillow. The pillows are soft, fluffy, and lightweight. They're made in the USA and Responsible Down Standard certified. Cons: The pillows are on the thinner side, so they might not appeal to folks who like a plump, overstuffed pillow. The price tag on these puppies is not for the faint of heart! Continental Bedding Premium 100% Down Pillows Responsible Down Certified fill and a 100% Egyptian cotton shell set apart the Continental Bedding Premium 100% Down Pillows. The soft, lightweight pillows are made in the USA. ContenderDownPillows puredownpuredown Natural Goose Down Feather White Pillow InsertsPros: The pillows have a 100% cotton shell and are stuffed with 85% goose feather and 15% goose down. The double-layered cotton shell and interior polyester layers help protect you from feather pricks. The pillows come in a pack of two for a relatively budget-friendly price. The pillows are Responsible Down Standard certified. Cons: Because the pillows are vacuum-packed for shipping, you'll need to give them 24+ hours to expand before first using them. This time might also be necessary for odors to off-gas. The pillows are fairly soft and lightweight. While this might appeal to some people, others will find them to be too flat or not firm enough. puredown Natural Goose Down Feather White Pillow Inserts High-quality materials and Responsible Down Standard certification distinguish the puredown Natural Goose Down Feather White Pillow Inserts. The pillows feature multiple layers of fabric around the fill to help protect against feather pricks. Best Flat PillowDownPillows downlitePros: The pillow is designed specifically for stomach sleepers and is flat to help support healthy neck alignment. It's filled with 525 to 550 fill power white duck down and has a 250 thread count cotton cover, which creates a soft feel. It's machine-washable and dryer-friendly. The pillow is assembled in the USA (from imported materials). Cons: Some users have shared the pillow might shed feathers over time. The pillow might have a bit of a smell when it first arrives. DOWNLITE Extra Soft Down Pillow Stomach sleepers should love the DOWNLITE Extra Soft Down Pillow, which has a flat design to promote healthy neck alignment in this position. The pillow is filled with 525 to 550 fill power white duck down and wrapped in a cotton cover. Best Well-Stuffed PillowDownPillows eastcoastEast Coast Bedding European White Goose Down PillowPros: The pillow is made from high-quality materials including a 400 thread count, 100% cotton shell in a sateen weave and 800 fill power white goose down. It's well-stuffed and does a good job of retaining its shape. You can purchase the pillows individually or as a two-pack; the two-pack gives you a slight price break. The pillow is made in the USA. Cons: These are not budget-friendly pillows, and they won't be accessible for all budgets. Because the pillow is well-stuffed, it might be a little puffy for some people's preferences (especially if you're a stomach sleeper). East Coast Bedding European White Goose Down Pillow High-quality materials and plenty of stuffing will make the East Coast Bedding European White Goose Down Pillow appeal to anyone who likes their pillow on the puffy side. The pillows are made in the USA and can be purchased individually or as a two-pack. Best BargainDownPillows JAJA COMFORTS Duck Feather and Down Bed PillowsPros: The pillows come in a pack of two, and the pack costs less than many individual down pillows. They're filled with 95% grey duck feather and 5% grey duck down and wrapped in a 100% cotton cover. The feathers and down are swaddled in four layers of fabric; this and double-line stitching help protect against leakage. They're machine-washable and dryer-friendly. Cons:You might have to fluff the pillows regularly to get them to maintain their loft. These pillows are relatively soft/flat, so if you like a firm or overstuffed pillow you'll want to look elsewhere. JAJA COMFORTS Duck Feather and Down Bed Pillows You'll be hard-pressed to find a pack of decent down pillows for a lower price than what you get with the JAJA COMFORTS Duck Feather and Down Bed Pillows. They're filled with 95% feathers and 5% down and wrapped in a 100% cotton cover. How We PickedThere's a lot of diversity in the world of down pillows. For instance, these pillows can vary a lot based on the materials used in their shells and fillings, the way the down is sourced, the pillows' loft, and so on. To filter through all the options out there, we focused on the following factors.CostDown pillows are generally pricier than other pillows, and they can range widely in price from around \$30 for two pillows to nearly \$200 for one. That's a huge range! We included pillows from both sides of the spectrum (and in between), so you can choose according to your budget.FeelWhen it comes to pillows, "feel" can refer to both hand feel and what it feels like to lay your head on the pillow. For instance, some shells are soft to the touch, while others are less so. Some pillows are flat, others are super puffy, and still others are somewhere in between. We included pillows that represent the full spectrum of options, so you can tailor your choice to your personal preferences.MaterialsDown pillows can be filled with goose down, duck down, goose feathers, duck feathers, or a combination thereof. Meanwhile, their shells can be made from cotton, polyester, or other materials. The materials used in a down pillow will affect its hand feel, loft, and so on. We included a variety of options so you can choose what suits you best.SourcingWhenever possible, we looked for options that are Responsible Down Standard certified, which helps ensure that down is sourced ethically from the animals who supply it. While every option on this list doesn't meet this standard, our top choices do.Sleepopolis Buying TipsReady to land the best down pillow for your needs? Consider the following:Is ethical sourcing important to you? Then look for options that are Responsible Down Standard certified. This is a quick way to rule out a lot of contenders.What are your preferences for materials? Do you want an Egyptian cotton shell, or does the shell's material not matter to you? Are you comfortable with a combination of feathers and down, or do you prefer one or the other? Do you care whether a pillow is filled with goose or duck down? Answering these questions is an effective way to whittle down your choices.What's your budget? Because down pillows can range wildly in price, clarifying your budget can help shrink the list of options. You should be able to find a decent pillow for anywhere from around \$30 to around \$200.For lovers of down pillows, nothing else will suffice. To find the best one for you, think about your budget alongside your preferences when it comes to materials, loft, ethics, and so on. Then get yourself a great pillowcase and prepare to enjoy the sleep of your dreams!Get the latest deals, discounts, reviews, and giveaways! Searching for the right pillow for that perfect night of sleep? The answer may lie in the comfort of the new Everlay pillow. Everlay is fairly fresh to the bedding industry and recently launched their new pillow. This review is going to dive into the construction and materials of the pillow that advertises "ultimate rest" and put it to the Sleepopolis test. In addition to a material and construction quality evaluation, we're also going to subject the Everlay pillow to our multi-night sleep test to see how it compares when the lights go out!Continue reading below for my full review of the Everlay pillow.Don't have time to spare? Click here to jump straight to the review summary.ConstructionThe Everlay pillow is built with gel memory foams and aims to create a cooler feeling pillow while holding onto the traditional feel of memory foam. Memory foams will compress and cradle your head and neck. This feel, in part, results from the visco elastic properties of memory foam.Compression from viscoelasticity can lead to a warmer pillow because of the reduced airflow under your head and neck. The gel infused into the foam works simultaneously to dissipate body heat.MORE: Pillow reviewsBy utilizing shredded foam, the Everlay pillow has a little more flexibility in shape and size. (Note: This is not an adjustable foam pillow.) Shredded foam also plays into the cooling aspect of the pillow by allowing for more airflow.Everlay Pillow - overallCoverEverlay doesn't specifically reveal the material used in the cover, but it feels like some kind of quilted cotton. It is soft to the touch and feels breathable. As far as aesthetics, the design of the Everlay pillow is pretty straight forward. A wide and textured navy gusset runs along the sides to separate the all white top and bottom.Everlay Pillow - coverFeel & SupportThe feel of this pillow is similar to a traditional memory foam, but different. Using shredded memory foam versus a more traditional solid molded foam, allows more air to circulate through the pillow and helps to keep you cool through the night. The foam is fairly dense compared to many other foams I have tested, but it still retains a soft feel.FAQ: What's the best neck pillow?This pillow has a similar feel to many other pillows of similar make and design, but one thing to note about the Everlay pillow is that it is not adjustable.Everlay Pillow - side viewPrice149)Other DetailsShipping - Free ShippingSmell - MinimalCare - Not machine washable (replace every 6-12 months)Trial - 100 night trialReturns - YesManufacturing - Made in the USAEverlay Pillow - detail should I Buy the Everlay pillow?All things considered, the Everlay is a nice shredded gel memory foam pillow. Its gel infused filling creates a moldable and cool pillow, while retaining the classic feel of a traditional memory foam. On the downside, this pillow may be hard to keep clean since it's not machine washable. The manufacturer recommends completely replacing the pillow every 6-12 months which would get very costly at \$75-\$85 per pillow. To make a pillow last longer, consider adding a pillow cover.I would recommend the Everlay pillow to sleepers who:Want nice support - This foam has a slightly denser feel than other traditional memory foams I have tested. In addition, the navy gusset on the sides helps to provide additional support as your head sinks into the pillow.Want a cooler pillow - The use of gel infused shredded foam makes this pillow soft and relatively cool throughout the night.Want a thicker cover - Some sleepers prefer the feel of a thicker cover and if that's you, you may really like the feel of the cover on the Everlay pillow. This thickness, again, contributes to the denser feel of this pillow. Materials Comfort Support Value Cooling Smell CompanySummaryThe Everlay pillow uses a shredded gel memory foam to provide the classic feeling of memory foam, but with enhanced cooling and better airflow. While not the coolest pillow I have tested to date, this pillow did have a nice feel to it and was very supportive. The navy gusset that runs across the entirety of the pillow helps to provide additional support while you sleep. Get the latest deals, discounts, reviews, and giveaways! For folks who don't stick to one sleeping position throughout the entire duration of their slumber, it's not a bad idea to have a pillow that meets the needs of every sleep style. However, finding a pillow that works well for every position can be tricky! That's partly why Morphis designed a pillow that can be adjusted according to your personal preferences and sleep habits.Some of you may already be familiar with the customizable comfort of the Morphis mattress, but in this review, I'll be taking a close look at the Morphis pillow. There are all kinds of different ways to play around with the height and firmness of this unique sleep accessory, so let's experiment! Don't worry if you don't have time to read the whole article, you can click here to skip to the review summary.Interchangeable layers make this customizable pillow perfect for combo sleepers! WHAT IS THE MORPHIS PILLOW MADE OF?The layers of the Morphis pillow are labeled to show their firmness levelsHOW DOES THE MORPHIS PILLOW FEEL?So, while there are two memory foam layers in this pillow, you're not exactly getting that body-conforming sink into the material that you might think of when you hear "memory foam." In my experience, the foam served to fortify the shape of the pillow, increase firmness, and help it keep a consistent loft while the microfiber-fill bumped up the plush factor.Like I said, when all the layers are inside, this pillow has a very firm feel and a pretty lofty profile. But the thing to remember is: the feel of this pillow changes with every configuration! I think side sleepers could be compatible with the pillow when it's at its loftiest and firmest, but back and stomach sleepers should definitely mix and match layers to find the combination that suits their specific needs. I would recommend that stomach sleepers remove a few layers to reduce the loft, and perhaps leave only the "soft" layer of memory foam and remove the "firm" one.Close up with the layers of the Morphis pillow! wouldn't say this pillow is very foldable, especially with all or most of the layers still inside. There is a "layer cake" sort of feel to the Morphis pillow and the more you stack, the less malleable it becomes. However, when you remove both the foam inserts and leave only the microfiber-fill inside, the pillow becomes much more shapeable, soft, and you can bunch it up or play around with the shape in order to adjust the feel.To me, the Morphis pillow feels temperature-neutral. The cotton cover itself feels pretty breathable, but there is just too much material going on inside this pillow for it to feel cool. That said, I didn't find it to trap heat either; it just had a very neutral temperature.Sleepers can mix and match the layers of the Morphis pillow until they find their perfect feelHOW DID YOU LIKE IT, SARAH?Since I sleep soundly on the Morphis mattress every night, I was extra excited to take this pillow for a test run. Before I even removed it from its packaging, my first impression was: "Wow, this pillow is enormous!" Granted, I'm testing the King size pillow, but its lofty profile and rectangular shape almost make it look like a dog bed (and it spans my entire torso!). Intrigued by its unique look, I threw it on the bed and got right into some side sleeping. I knew that the six layers inside were interchangeable, but I began testing the pillow exactly as it came. When I'm sleeping in the lateral position, I like a lofty build with a firm feel so I had the sense that this pillow would be best suited for side sleeping when it's at its fullest. Using this pillow on my side, I felt very supported. The loft was tall enough to keep my head, neck and spine in neutral alignment as well as relieve pressure in my shoulder.Side sleeping on the Morphis pillowThe combination of the fluffy microfiber and the body conforming memory foam served to offer a nice balance between plush and supportive. While I did feel comfortable on my side, and my posture felt healthy, I do wish that this pillow were a bit more foldable. When it's got all six layers stuffed inside, the pillow is not very foldable or shapeable. It's practically bursting with comfort layers which, like I said, offers a nice cushy feel, but I do like to bunch and fold my pillow when I'm on my side.After lying in the lateral position for a while, I was pleased to note that the pillow didn't seem to be trapping my body's heat. I was eager to unzip and play around with the layers, so I removed two of the microfiber layers as well as the "soft" memory foam layer, and settled back into some side sleeping. Boy, what a difference a few layers makes! With half of the layers gone, the pillow became far more foldable which I liked, but not lofty enough for side sleeping.So, I rolled over onto my back to see how this newly arranged medium-firm feel would suit me. Right away, I could tell that having all the layers inside would have been too firm and lofty for this position (or, frankly, any position). Of course, everybody is different, but I only really like a firm and lofty pillow for side sleeping. Otherwise, I like my pillow to have more soft, fluffy characteristics. Lying on my back, I felt supported (particularly by the "firm" layer of foam) and I felt like my spine was aligned.Trying out the Morphis pillow for back sleepers! played around with the layer configurations some more while in the supine position, and found this pillow to be more versatile for back sleeping. The only fill combinations that really didn't work for me in this position were with all six layers inside, and with both foam layers removed. Otherwise, I was able to find comfort with every height and firmness level. The microfiber and foam work well together and offer a cozy, balanced feel into some side sleeping. I knew that the six layers inside were interchangeable, but I began testing the pillow exactly as it came. Otherwise, I was able to find comfort with every height and firmness level. The microfiber and foam work well together and offer a cozy, balanced feel into some side sleeping. I knew that the six layers inside were interchangeable, but I began testing the pillow exactly as it came. When I'm sleeping in the lateral position, I like a lofty build with a firm feel so I had the sense that this pillow would be best suited for side sleeping when it's at its fullest. Using this pillow on my side, I felt very supported. The loft was tall enough to keep my head, neck and spine in neutral alignment as well as relieve pressure in my shoulder.Side sleeping on the Morphis pillowThe combination of the fluffy microfiber and the body conforming memory foam served to offer a nice balance between plush and supportive. While I did feel comfortable on my side, and my posture felt healthy, I do wish that this pillow were a bit more foldable. When it's got all six layers stuffed inside, the pillow is not very foldable or shapeable. It's practically bursting with comfort layers which, like I said, offers a nice cushy feel, but I do like to bunch and fold my pillow when I'm on my side.After lying in the lateral position for a while, I was pleased to note that the pillow didn't seem to be trapping my body's heat. I was eager to unzip and play around with the layers, so I removed two of the microfiber layers as well as the "soft" memory foam layer, and settled back into some side sleeping. Boy, what a difference a few layers makes! With half of the layers gone, the pillow became far more foldable which I liked, but not lofty enough for side sleeping.So, I rolled over onto my back to see how this newly arranged medium-firm feel would suit me. Right away, I could tell that having all the layers inside would have been too firm and lofty for this position (or, frankly, any position). Of course, everybody is different, but I only really like a firm and lofty pillow for side sleeping. Otherwise, I like my pillow to have more soft, fluffy characteristics. Lying on my back, I felt supported (particularly by the "firm" layer of foam) and I felt like my spine was aligned.Trying out the Morphis pillow for back sleepers! played around with the layer configurations some more while in the supine position, and found this pillow to be more versatile for back sleeping. The only fill combinations that really didn't work for me in this position were with all six layers inside, and with both foam layers removed. Otherwise, I was able to find comfort with every height and firmness level. The microfiber and foam work well together and offer a cozy, balanced feel into some side sleeping. I knew that the six layers inside were interchangeable, but I began testing the pillow exactly as it came.
